**ABSTRACTED-PUB-NO:** KR2002003892A

**BASIC-ABSTRACT:**

**NOVELTY** - A method and a system for an on-line auction on the basis of a plurality of telephone calls are provided to integrate a domestic auction and an international auction and enable a buyer to receive an opportunity for a bid based on a currency of ones own country by setting a plurality of currencies as a standard of an auction.

**DETAILED DESCRIPTION** - If a seller connects to an auction site, an interface judges whether the seller is a normal seller and a log-in process for the seller is performed(200). A web server embodies an auction plural currency designating ticket to the seller and displays a plural currency designating dialogue window(201). The seller designates and inputs an auction plural currency(202) and the web server judges whether a plurality of currencies is designated in the inputted information(203). If a plurality of currencies is designated, the designated information is stored in a DB using a DB managing

server(205). The web server displays the plurality of currencies(206) and obtains and displays exchange rate information of an exchange rate information supplying site using the interface as a standard for deciding an auction starting price of each designated currency(207). If the seller sets and inputs an auction starting price(208), the web server checks input or not of the set auction starting price using the DB managing server(209) and stores the price in the DB(211). If an auction starting price is not decided, an auction starting price designated by a pre-regulation is set and stored in the DB(210). Auction information inputted by the seller is displayed for a seller's checking process(212).
